

Task 2 Model Answer

Link: <https://github.com/vagabond-systems/forage-lyft-task-2-model-answer>

Task 2 is all about implementation, so take some time to compare the system architecture to each class in the model answer. Pay special attention to the ways in which each class interacts with its neighbors (and more importantly, which classes it is wholly decoupled from). Consider the steps necessary to modify different parts of the system.

Remember that it has been designed with extensibility in mind which inevitably adds some complexity. If a part of the system doesn't make sense, or you are having trouble figuring out why it was designed that way, take a look at the design pattern resources linked in the task description.
