

Task 3 Model Answer

Link: <https://github.com/vagabond-systems/forage-lyft-task-3-model-answer>

All of the work done for this task is in the test directory. The tests have been organized to match the file structure of the source files. They have each been implemented using the unittest framework which comes bundled with python by default. Each test case simply checks that its component works as expected. Take another look at the linked resources on unit testing if you find any of this confusing.
